

Okay, little buddy! Imagine you have a big, colorful picture, like a big puzzle. Sometimes, that picture can be cut into smaller pieces, like when you break a cookie into bits. Each piece is called a 'fragment.'

Now, when we ask you 'Which fragments are from the picture?', we want to find out which pieces belong to our big picture and fit together to make it look whole again.

It's like playing a game! You can look at different pieces and decide if they match. If a piece has some blue sky or a green tree from that big picture, then it is from the picture!

So, can you help me find the pieces that belong to our big, beautiful picture?
