

What Are Picture Fragments?

Okay, little buddy! Imagine you have a big puzzle. When you put it together, you can see a big picture, right? But what if you took that big picture and tore it into smaller pieces? Those smaller pieces are what we call 'fragments'

Now, when someone asks 'which fragments are from the picture?', they want to know which little pieces come from the big picture.

For Example:

Let's say your big picture is of a cute puppy playing in the grass. If you tear that picture into pieces, some pieces will show:

- The puppy's head
- A paw
- Some grass
- A tree in the background

All of these little pieces are fragments that come from your big puppy picture!

Activity:

You can even try this at home! Take a picture you really like and cut it into smaller pieces. Then, see if you can reassemble the fragments back into the original picture. It's a fun way to learn about fragments!
