

Alright! Let's talk about soft serve ice cream in a fun way!

You know how when you blow up a balloon, it gets bigger and lighter? That's because it has air inside it. Soft serve ice cream is kind of like that! It has a lot of air mixed in with the ice cream, which makes it light and fluffy. This extra air is what helps it twist and turn when it's made in a special machine.

When you order a soft serve ice cream cone, the machine takes the ice cream and spins it, using the air to shape it into that fun, curly top that looks like a swirl or a spin. This is why soft serve can look so pretty and why it's easy to eat. So, in short, soft serve ice cream is super fun because it has more air inside, making it light and allowing us to enjoy it in delicious, twisty shapes!
