

What is a Tree?

A tree is a big plant that grows tall!

Parts of a Tree

Let's learn about the different parts of a tree:

- **Roots:** These are like the feet of the tree. They hold the tree in the ground and drink water from the soil.
- **Trunk:** The trunk is the big, strong part in the middle. It helps the tree stand tall and is like a superhero's body!
- **Branches:** These are the arms of the tree. They stretch out from the trunk and hold the leaves.
- **Leaves:** Leaves are like the tree's clothes. They are usually green and help the tree eat sunshine!

Why Are Trees Important?

Trees are very important! They give us oxygen to breathe, shade to cool us down, and homes for animals. Plus, they look beautiful! So, next time you see a tree, you can say, 'Hello, tree!' and think about its strong roots, tall trunk, friendly branches, and sunny leaves!
