

Building a house is like making a big puzzle! First, we need a **plan**, which is like a map showing what the house will look like. This plan helps everyone know where to put things.

Next, we start with a **strong base**. This is like putting down a thick, strong piece of wood or concrete. It holds everything up so the house doesn't fall.

After the base is ready, we build **walls**. Walls are like the sides of the box that keep us safe inside. They help keep the wind and rain out!

Finally, we put on the **roof**. The roof is like a big hat for the house that keeps the rain from coming in and protects us from the sun!

So, remember: a house starts with a plan, then has a strong base, walls, and a roof. And that's how a house is built!
