

Firefighters are very special people who help us when there is a fire. When a building is on fire, they put on their big, shiny fire suits and helmets to keep safe. They go into the building to help anyone who might be stuck inside and need help getting out.

They also use big hoses to spray water on the fire to make it go away and stop it from spreading to other places. This is really important because we don't want the fire to get bigger or to reach other buildings and start more fires.

So, firefighters are like superheroes! They save lives and keep us safe from fires!
