

Okay, buddy! When pilots fly airplanes, they wear special headphones. Let me tell you why they do that!

1. **Talking to Each Other:** Pilots need to talk to their co-pilot and the people on the ground. The headphones help them hear each other better, even when the airplane is really noisy!
2. **Listening to Important Sounds:** The headphones also help pilots hear important sounds from the airplane, like alarms that let them know if something is wrong.
3. **Blocking Out Noise:** Airplanes can be super loud, like a big roar! The headphones help block out that loud noise so pilots can focus on flying and not get distracted.
4. **Safety First:** Wearing headphones is a safety thing. It helps them stay calm and aware, which is really important when you're flying high in the sky.

So, those headphones are really helpful for pilots while they are flying the plane!
