

Okay, little buddy! Imagine if you were a sleepyhead owl. Owls are special birds that like to be awake when it is dark outside, which is at night. Just like how we have our daytime with the sunshine, owls have their own time to play.

Now, you know how sometimes you go to bed, and it gets dark? Well, when it gets dark, owls start to fly around and hunt for food! They look for little animals like mice to eat. They have big eyes that help them see in the dark, just like superhero goggles!

So, instead of sleeping like us when it's night, owls are busy looking for dinner and having fun. When the sun comes up and it's light again, that's when they go to sleep and rest. Isn't that cool?
