

What Are Passenger Trains?

Passenger trains are special trains that carry people from one place to another. Imagine you and your family going on a trip and riding on a train! These trains have comfy seats, windows to look out of, and sometimes even restrooms. They travel between cities and take you to fun places like parks or other towns.

What Are Freight Trains?

Freight trains, on the other hand, are like big trucks on tracks. Instead of carrying people, they carry things! These things can be food, toys, or cars that need to get to different places. Freight trains have lots of cars or containers attached to them, and they can be very long because they have to carry a lot of stuff!

Key Differences

- **Purpose:** Passenger trains take people places, while freight trains deliver items.
- **Design:** Passenger trains have seats and restrooms, but freight trains have big, open spaces to hold cargo.
- **Speed:** Sometimes, passenger trains go faster than freight trains because they need to get people to their destination quickly.

So, the next time you see a train, you can ask yourself: Is that a passenger train or a freight train? And now you know why they are different!
