

Hey there! Let's talk about bricks. You know those red square things you see in buildings? Those are called bricks!

Why Are Bricks Strong?

Bricks are made from clay and heat. When they are baked, they become very hard, just like a cookie gets hard when you bake it in the oven! Because they are so hard, they do not break easily, which makes them strong.

Bricks are Great for Walls

When we build walls with bricks, they help keep our homes safe! They can hold up the roof and protect us from wind, rain, and even bugs. Imagine if you build a fort with blocks; the more blocks you use, the stronger your fort gets. Bricks work in the same way!

So, bricks are strong and super helpful for making walls. Isn't that neat?
