

Building walls with bricks makes a strong and sturdy structure. Let's break it down in a simple way:

1. **Bricks:** Bricks are like small blocks made from clay. They are hard and can stack on top of each other.
2. **Mortar:** To hold the bricks together, builders use something called mortar, which is a sticky paste. It helps make sure the bricks don't fall apart.
3. **Stacking Bricks:** When we stack the bricks on top of each other in lines, and use mortar between them, we start to create walls!
4. **Strength:** Walls made of bricks are strong and can hold up a roof, which keeps us safe and warm inside.
5. **Building Up:** When we build with bricks, we can go as high as we want, making tall buildings if we keep stacking them properly!

So, building walls with bricks makes a safe place for people to live and work, just like how you build a fort or a castle with your toys!
