

To find out how many pieces of pizza Kevin had left after dropping some, we can follow these steps:

1. **Identify the total number of pieces:** Kevin had a total of **16 pieces** of pizza.
2. **Determine how many pieces were dropped:** He dropped **5 pieces**.
3. **Calculate the pieces left:** To find out how many pieces he has left, we subtract the number of pieces dropped from the total number of pieces:
 $16 \text{ (total pieces)} - 5 \text{ (dropped pieces)} = 11 \text{ (pieces left)}$.
4. **Express this as a fraction:** The fraction of pizza pieces Kevin has left is **11 out of 16** pieces, which can be written as the fraction: **11/16**.

In conclusion, Kevin has **11/16** of the pizza left.
