

Why Do Tigers Look Different?

Hey there! Today, we're going to talk about tigers and their colors. Can you guess what color tigers are? Most people say orange! And they're right! Tigers are usually a bright orange with black stripes. But here's something super cool: to some animals that tigers like to chase and eat (like deer or rabbits), tigers look green!

Why Do Tigers Look Orange to Us?

Humans have special eyes that help us see colors in a certain way. When we see a tiger, we see its beautiful orange fur with those cool black stripes. It helps us to spot tigers when we're looking for them in the jungle or a zoo!

Why Do Tigers Look Green to Other Animals?

Now, the animals that tigers hunt, like deer, have different eyes. These animals can see colors in a way that makes the tiger's orange fur appear green. This helps the tiger blend into the grass and plants when it's trying to sneak up on them. It's kind of like a game of hide and seek!

What Can We Learn?

This shows us how amazing nature is! Different animals see the world in different ways. What we see as bright orange, others might see as green. It's all about what helps them survive!

Let's Remember!

- Tigers are usually orange with black stripes for us.
- To their prey, tigers can look green!
- Different animals see colors differently!

Next time you see a tiger, remember how unique and clever they are in the wild!
