

# All About Snails!

Hi there, little buddy! Today, we're going to learn about a very special little animal called a snail!

## What is a Snail?

A snail is a tiny creature that has a soft body and a hard shell on its back. It's kind of like wearing a little house wherever it goes!

## Where Do Snails Live?

Snails like to live in places where it's wet, like in gardens or near ponds. They like the rain because it helps them stay moist!

## What Do Snails Eat?

Snails eat plants! They love to munch on leaves and flowers. Sometimes, they even eat fruit. Yum!

## How Do Snails Move?

Snails move very slowly. They slide on their bellies using a little bit of slime, which helps them glide along smoothly.

## Fun Fact!

Did you know some snails can sleep for many days? They can stay in their shell for a long time when it gets really dry!

## Let's Recap!

- Snails have soft bodies and hard shells.
- They live in wet places.
- They eat plants and fruits.
- Snails move slowly with slime!

Now you know some cool things about snails! Maybe you can find one in your garden and watch it move!
