

Why Does the Hare's Fur Change Color?

Have you ever noticed how some animals change their appearance with the seasons? One cool animal that does this is the hare!

What is a Hare?

A hare is a little animal that looks like a big bunny. They love to hop around in fields and forests.

Hares and their Magical Fur Change

In winter, when the snow covers the ground and makes everything white, the hare changes its fur color from brown to white. This is a special trick to help it stay safe!

How Does It Work?

- 1. Winter is Here:** When winter comes and the snow falls, the hare's body notices the change in the environment.
- 2. Time for a Change:** The hare's body starts to grow new white fur. This happens every year!
- 3. Camouflage:** With its new white fur, the hare blends in with the snow. This is called camouflage, and it helps protect the hare from animals that might want to eat it.
- 4. Playing Hide and Seek:** Just like when you play hide and seek, the white hare looks like it's hiding in the snow, making it hard for others to see it!

Why is this Important?

This change helps the hare survive in the cold and snowy weather. It's a smart way for animals to adapt to their environment!

Fun Fact!

When spring comes and the snow melts, the hare's fur turns back to brown. This helps it hide in the grass and dirt again!

So, next time you see a white hare in the snow, remember how clever nature is!
