

## How Elephants Use Their Trunk to Spray Water

Hi there! Have you ever seen an elephant at the zoo or on TV? They are really big animals with long trunks that look like big noses!

Did you know that elephants can use their trunks like a super cool water pump? Here's how it works, step by step:

1. **Breath In:** First, when an elephant wants to drink water, it puts its trunk into a river or pond and sucks up some water. The trunk is like a giant straw!
2. **Pumping Out:** After the elephant has enough water in its trunk, it lifts the trunk up high and then blows the water out. It's like blowing a big bubble!
3. **Splash and Spray:** The elephant can spray the water all over itself! This helps them cool down when it's hot outside. It's like taking a fun shower!
4. **Playing Around:** Sometimes, elephants spray water on their friends too! They love to play and have fun with water.

So, next time you see an elephant, remember how amazing their trunk is for drinking water and having fun!
