

# How Elephants Stay Cool

Did you know that elephants are the largest land animals? They have a special part of their body called a trunk. It's not just a nose; it's an amazing tool!

Let's explore how elephants use their trunks:

1. **Sucking Up Water:** Elephants can use their trunks like a giant straw! They dip their trunk into a river or pond and suck up the water.
2. **Spraying Water:** After they have water in their trunks, they can spray it all over themselves! They do this to cool down when they feel hot.
3. **Look, It's Like a Shower!** When an elephant sprays water, it's just like taking a shower. It helps them stay clean and keep their skin nice and cool.

So, when you see an elephant spraying water, remember, they are just trying to beat the heat!
