

Hi there! Let's have some fun with shapes while we play with our friends in the park!

When you're at the park, you can look at the toys your friends have brought. Each toy has a different shape. Shapes are all around us, and they help us understand the world better. Here are some common shapes you might see:

- **Circle:** A round shape, like a ball or a frisbee!
- **Square:** A shape with four equal sides, like a block or a toy box!
- **Triangle:** A shape with three sides, like a triangle slide or a slice of pizza!
- **Rectangle:** A shape with two long sides and two short sides, like a book or a blanket!

When you play with your friends, you can point to each toy and say what shape it is. You can even look for those shapes in the park! For example, the sandbox is usually a rectangle, and the merry-go-round is a circle.

Playing with shapes while having fun with your friends makes learning exciting! So, let's go out and see what shapes we can find!
