

# The Brown Spots on a Giraffe's Skin

Do you want to know something cool about giraffes? They have very special skin! If you look closely at a giraffe, you'll see that its skin is covered in lots of brown spots.

## Step by Step Explanation:

1. **What is a Giraffe?**

A giraffe is a tall animal with a very long neck. They live in Africa and eat leaves from trees.

2. **What Color is a Giraffe's Skin?**

A giraffe has a light tan or cream-colored body, but everywhere on its body are brown spots!

3. **Where are the Spots?**

The spots are all over the giraffe's body. They are not just on its back; you can see them on its legs too!

4. **Why Do They Have Spots?**

The brown spots help giraffes blend in with the trees and bushes in their home. This makes it harder for predators to see them, which helps them stay safe.

5. **Do All Giraffes Have the Same Spots?**

No, each giraffe has a unique pattern of spots, just like how we all have different fingerprints!

So, next time you see a picture of a giraffe, remember how special their brown spots are!
