

Imagine building your very own airplane like a giant puzzle! Building an airplane involves putting together many pieces to create a flying machine. Let's break it down into simple steps:

**Step 1: Design your airplane** - Think about what your airplane will look like. Will it have big wings or small wings? Draw a sketch of your airplane on paper.

**Step 2: Gather materials** - You'll need materials like wood, plastic, and metal to build your airplane. These materials will help your airplane stay strong and stable.

**Step 3: Build the frame** - The frame is like the skeleton of your airplane. Use the materials to create the shape of your airplane, including the wings, body, and tail.

**Step 4: Add the engine** - The engine is what makes your airplane fly. Attach the engine to the frame of your airplane to give it power.

**Step 5: Paint and decorate** - Add colors and designs to your airplane to make it unique. You can use stickers, paint, or markers to make your airplane stand out.
