

Once upon a time, there was nothing in the universe, and then God decided to create everything! He has a big imagination, just like you, and wanted to make a world full of amazing things!

First, God created the sky. He filled it with bright stars during the night and a warm sun during the day. The sky is very big and helps everything feel spacey!

Then, God made the land. He created mountains that are really tall and flat plains where people can walk. He also made rivers that flow with water and oceans that are super wide!

To make the world interesting, God added plants and trees. Some plants are tiny, and others are huge! Each one helps the animals and people to live and enjoy their homes.

Speaking of animals, God created lots of them—like big elephants, tiny ants, colorful birds, and even mysterious fish in the oceans! Each animal has a special home in the world he created.

Finally, God made people to live in this amazing world he designed. He made every person unique and special. Just like how we are all part of a big family, all the creations are part of God's big world!

The world feels big because it has so many different places and creatures, each with their own stories. And that's how God made the world so big and beautiful!
