

What is Groundhog Day?

Groundhog Day is a fun holiday that happens every year on February 2. People look forward to seeing a special animal called a groundhog to help them know when spring will arrive.

What is a Groundhog?

A groundhog is a small, furry animal that lives in burrows underground. They like to eat grass and vegetables, and they sleep a lot during the winter, which is called hibernating.

What Happens on Groundhog Day?

On Groundhog Day, people wake up early in the morning to see if the groundhog will come out of its burrow. This is important because:

- If the groundhog sees its shadow, it gets scared and goes back into the burrow. This means there will be six more weeks of winter.
- If the groundhog does not see its shadow, it stays outside. This means that spring is coming soon!

Why Do People Care?

People love to see if the groundhog can actually predict the weather! It's like a fun game. Many families celebrate Groundhog Day by watching the event on TV or making fun crafts and snacks.

Let's Remember!

Groundhogs are cute and special creatures that can help us learn about the seasons. So, when you hear about Groundhog Day, remember that it's all about waiting to see what the little groundhog will do. It helps us get excited about the arrival of warmer weather!
