

# What Do We See When We Put Up a Tent?

When we put up a tent, we can see a shape that looks like a triangle! A triangle has three sides and three corners. It's one of the easiest shapes to make, just like the roof of a house.

## Why Do We Use Triangles for Tents?

1. **Strong and Stable:** Triangles are very strong. When the wind blows, the triangle shape helps the tent stay up without falling down.
2. **Easy to Make:** It's easy to shape a triangle with long poles and fabric. You tie the fabric to the poles to make the tent cover.
3. **Good for Rain:** The slanted sides of a triangle help the rain slide off, keeping us dry inside!

## Finding Triangles in Nature

Look around outdoor areas with trees. Can you find other triangles? Think about the roofs of houses or even some Christmas trees!

## Fun Activity!

Next time you see a tent, count how many triangles you can find! You might even want to draw your own triangle tent.
