

Why Do Police Cars Use Sirens?

When a police car is chasing someone who is doing something wrong (like a bad guy), they turn on their siren. This is a loud sound that lets everyone know that the police are coming!

Step 1: What is a Siren?

A siren is a special loud sound that police cars and fire trucks make. It helps them get to places quickly because it tells people to move out of the way.

Step 2: Why Do Police Use Sirens When Chasing?

When the police are chasing someone, it is really important for them to get there quickly. The siren helps:

- **Alert People:** The loud noise tells people on the road that the police are coming. This way, they can move aside and let the police pass.
- **Scare Off Bad Guys:** Sometimes, when the bad guys hear the siren, they might get scared and stop running.
- **Help Find the Bad Guy:** The siren helps the police get to the bad guy faster so they can help keep everyone safe.

Step 3: What Should You Do When You Hear a Siren?

When you hear a police siren, you should listen for it and move to the side of the road if you are walking or riding your bike. That way, you are safe and letting the police do their job!

Conclusion

Siren sounds are very important for police cars. They help them get to places quickly and keep everyone safe. So, next time you hear a police siren, remember it's because they are working hard to help us!
