

What is a STAR Shape?

A star shape is a fun and interesting shape that looks like a star you might see in the night sky! Usually, we see star shapes with five points, but sometimes they can have more points, like six or even more!

Let's Learn About the Parts of a Star Shape:

- **Points:** A star shape has sharp points that stick out. A five-pointed star has five points!
- **Lines:** The lines that connect the points can be straight or angled, helping to create the star's design.
- **Edges:** The edges of a star shape are the parts where the lines meet.

How to Draw a Five-Pointed Star:

1. Start by drawing an upside-down triangle.
2. Next, draw another upside-down triangle on top of it, making sure the points meet in the middle.
3. Now, connect the two triangles with straight lines to form the star shape.

Fun Facts About Stars:

- Stars can be found in the sky at night; they twinkle and shine!
- The shapes we make (like a star) can be found in decorations, art, and sometimes even in sports!

Now that you know about star shapes, why not try drawing some of your own? You can color them in and make them look even more amazing!
