

# Hyenas and Their Strong Teeth!

Hey there, little explorer! Today, we are going to learn about some amazing animals called **hyenas**.

## What are Hyenas?

Hyenas are furry creatures that live in places like Africa! They have a special way of living and are known for making funny sounds, kind of like laughing! But that's not all that makes them special.

## Strong Teeth!

Hyenas have big, strong teeth. Can you make a big smile with your teeth? Now imagine if your teeth were even stronger than they are! Hyenas can use their teeth to crush hard things like **bones**.

## Why Do They Crush Bones?

When a hyena eats food, sometimes they find leftovers from other animals. Some of those leftovers are bones! Their strong teeth help them break the bones into tiny pieces so they can eat every part of their meal.

## How Do They Do It?

Imagine cracking open a tough nut with your hands! Hyenas do something similar with their mouths. They take the bone in their mouths and bite down really hard. This is how they get all the yummy things out of the bone!

## Fun Fact!

Did you know that hyenas can crush bones so well that they can even get the nutrients from inside? It's like finding treasure in food!

So, next time you hear a hyena laughing or you see a picture of one, remember those strong teeth that are great at crushing bones!

Keep exploring and learning about animals - there's so much fun to discover!
