

# Zebra's Favorite Food

Zebras are interesting animals known for their black and white stripes. Just like horses, they are herbivores, which means they eat plants. The favorite foods of zebras mainly include:

- **Grasses:** Zebras love to eat different types of grass. They spend a lot of their day grazing on grasslands.
- **Leaves:** They also enjoy munching on the leaves of bushes and trees, especially when grass is scarce.
- **Herbaceous Plants:** Zebras sometimes eat tender plants and flowers when they can find them.

In summary, zebras mainly eat grasses, but they are also known to nibble on leaves and other vegetation. Their strong teeth help them chew tough plants, which is important for their diet. Zebras need a lot of food to keep their energy up, especially since they are always on the move!
