

Sure! I will create a child-friendly explanation of 'Fraction' for you. Here is the answer: A fraction is a number that represents a part of a whole. Imagine you have a pizza and you want to share it with your friends. If you cut the pizza into four equal slices, each slice is a fraction of the whole pizza. So, if you have two slices out of the four, you would say you have  $\frac{2}{4}$  of the pizza. The top number (numerator) tells you how many parts you have, and the bottom number (denominator) tells you how many parts the whole thing is divided into. Fractions are like pieces of a puzzle that fit together to make a whole picture. I hope this explanation helps!
