

To convert the decimal **0.7** into a fraction, follow these simple steps:

1. **Understand the Decimal:** The decimal 0.7 means 7 tenths. This is because the digit 7 is in the tenths place, which is the first digit to the right of the decimal point.
2. **Write it as a Fraction:** You can express 0.7 as a fraction with 7 as the numerator and 10 as the denominator. Therefore, you write:

$$\mathbf{0.7 = 7/10}$$

3. **Simplify if Necessary:** In this case, 7 and 10 share no common factors (other than 1), so this fraction is already in its simplest form.
4. **Conclusion:** Thus, the decimal 0.7 can be represented as the fraction **7/10**.

And that's it! You've successfully converted 0.7 into a fraction.
