

To write -0.8 as a fraction like you're a child, let's first understand what the number -0.8 means. When we see a negative sign in front of a number, it means we're dealing with less than zero or numbers that are smaller than 0. So, -0.8 is a number smaller than 0 but larger than -1.

Now, to convert -0.8 into a fraction, we can start by writing it as a fraction with -8 as the numerator and 10 as the denominator. Since -0.8 is equivalent to $-8/10$, we can simplify this fraction by dividing both the numerator and the denominator by their greatest common divisor, which is 2 in this case.

After simplifying, we get $-8 \div 2 = -4$ and $10 \div 2 = 5$. So, the fraction form of -0.8 is $-4/5$. This means that -0.8 can be represented as $-4/5$ when written as a fraction.

In simpler terms, imagine you have a pizza divided into 5 equal slices. If you take away 4 slices from it, you're left with -4 slices out of the original 5. This is similar to how -0.8 can be written as $-4/5$ in fraction form.

So, in conclusion, -0.8 as a fraction is $-4/5$. It's like having -4 slices of pizza out of 5 total slices.
