

To find out what **0.6 of 40** is, we can follow these simple steps:

1. **Understand what 0.6 means:** The number 0.6 can be read as 'six-tenths.' This means that if we divide something into 10 equal parts, 0.6 represents 6 of those parts.
2. **Convert 0.6 into a fraction:** As mentioned, 0.6 is the same as **6/10** or **3/5** when simplified.
3. **Multiply:** To find 0.6 of 40, we will multiply 40 by 0.6. So we will do:

$$40 \times 0.6 = 24$$

4. **Conclusion:** Therefore, **0.6 of 40 is 24**. This means if you take 60% (or six-tenths) of 40, you will get 24!
