

Objective

By the end of this lesson, you will be able to build a tower using Duplo blocks.

Materials and Prep

- Duplo blocks

No prior knowledge or preparation is required for this lesson.

Activities

- Activity 1: Sorting the blocks

Start by sorting the Duplo blocks by color or size. This will help you identify the blocks you have and make it easier to build your tower.

- Activity 2: Building a small tower

Begin by selecting a few blocks of different sizes. Start with the largest block as the base and stack the smaller blocks on top to create a tower. See how high you can build it without it falling down.

- Activity 3: Building a tall tower

Challenge yourself to build a taller tower by adding more blocks. Remember to keep the base stable and try to balance the blocks as you stack them.

- Activity 4: Building a tower with a pattern

Create a tower using blocks of different colors in a specific pattern. For example, you can alternate between red and blue blocks as you stack them. Get creative and make your tower visually appealing!

Talking Points

- Blocks come in different shapes and sizes.
- The larger blocks can provide a stable base for the tower.
- When stacking blocks, it's important to balance them to prevent the tower from falling.
- You can use different colors to make your tower more interesting.
- Building a tower requires patience and problem-solving skills.
- It's okay if your tower falls down, just try again and learn from the experience.
