Objective

By the end of this lesson, the student will understand the basics of animal husbandry and agriculture through the lens of Minecraft. They will learn how to care for animals, grow crops, and understand the importance of these practices in real life.

Materials and Prep

- Minecraft (the student should have access to the game)
- Paper and pencil for notes and drawings
- A comfortable space to play Minecraft

Before starting the lesson, ensure the student knows how to access Minecraft and has a basic understanding of gameplay mechanics. It may be helpful to have a brief discussion about what they already know about farming and animals in Minecraft.

Activities

• Build a Farm:

The student will create a small farm in Minecraft, planting crops such as wheat, carrots, and potatoes. They will learn about the growth cycles of these plants and how to harvest them.

• Caring for Animals:

The student will gather and care for animals in Minecraft, such as cows, pigs, and chickens. They will learn how to breed these animals and understand the importance of providing food and shelter for them.

Animal Breeding Simulation:

The student will simulate animal breeding in Minecraft, observing how the animals reproduce and what conditions are necessary for breeding. They will take notes on the offspring and what traits they inherit.

• Crop Rotation Discussion:

The student will learn about the concept of crop rotation and why it's important for maintaining soil health. They can create a simple crop rotation plan for their Minecraft farm.

Talking Points

- "Animal husbandry is all about caring for animals. Can you think of why it's important to take care of them?"
- "In Minecraft, just like in real life, crops need time to grow. What crops can you plant, and how long do you think they take to grow?"
- "Breeding animals can help you create more animals! What do you think are the best conditions for animals to breed?"
- "Crop rotation helps keep the soil healthy. Why do you think changing the crops you plant each

season can be beneficial?"

• "Farming in Minecraft can teach us a lot about real-life agriculture. What are some things you've learned that you can apply outside of the game?"
