

## Objective

By the end of this lesson, the student will understand the concepts of a million, a billion, and a trillion, and be able to visualize these large numbers through fun activities and comparisons.

## Materials and Prep

- Paper
- Pencil
- Markers or colored pencils (optional)
- Calculator (optional for large number calculations)

Before the lesson, it would be helpful to have a basic understanding of counting and place value. Familiarize yourself with the terms million, billion, and trillion.

## Activities

- **Counting Challenge:**

Have the student count to a million using intervals. For example, count by 10s, 100s, or 1,000s. Discuss how long it would take to count to a million if they counted one number every second.

- **Visualization Art:**

Ask the student to draw a picture that represents a million, a billion, and a trillion. For example, they can draw dots, stacks of coins, or anything that helps them visualize these large numbers.

- **Number Comparisons:**

Have the student create a chart comparing a million, a billion, and a trillion. They can list things that are approximately a million (like the number of people in a small city), a billion (like the number of stars in a galaxy), and a trillion (like the national debt of a country).

- **Time Travel:**

Discuss how long different numbers of seconds, minutes, and hours are. For example, explain that a million seconds is about 11.5 days, a billion seconds is about 31.7 years, and a trillion seconds is about 31,688 years!

## Talking Points

- "A million is a big number, but it's just the beginning! Imagine counting to a million; it would take you a really long time!"
- "Now, a billion is 1,000 times bigger than a million. Can you believe that? That means if you had a million dollars and then a billion dollars, you'd have to count a lot more zeros!"
- "And then we have a trillion, which is 1,000 times bigger than a billion. That's a huge number! It's hard to even imagine what a trillion looks like!"
- "To help you understand, think about this: if you had a trillion dollars, you could give every person in the U.S. about \$3,000!"
- "Counting seconds can help us visualize these numbers. Remember, a million seconds is about

11.5 days, a billion seconds is about 31.7 years, and a trillion seconds is about 31,688 years!"
