

Objective

By the end of this lesson, the student will understand basic concepts in English, Math, and Science through engaging activities inspired by the Gorilla Tag VR game. They will improve their vocabulary, practice arithmetic, and learn about gorilla behavior and habitats, all while having fun!

Materials and Prep

- Access to a computer or VR headset with Gorilla Tag (optional for reference)
- Notebook and pencil for writing
- Internet access for research
- Timer or stopwatch

Before the lesson, make sure to familiarize yourself with the game Gorilla Tag and its basic mechanics. This will help in relating the activities to the game.

Activities

- **Vocabulary Building:**

Choose five words related to gorillas or the game (e.g., "agile," "habitat," "tag," "teamwork," "simulate"). The student will write definitions and use each word in a sentence.

- **Math Tag:**

Set up a simple math game where the student has to solve math problems to "tag" a friend or a family member. For example, for every correct answer, they can take a step closer to tagging the person. Use addition, subtraction, and multiplication problems.

- **Gorilla Behavior Research:**

Have the student research one interesting fact about gorillas. They will present their findings in a fun way, such as creating a short story or a comic strip featuring a gorilla character based on their research.

- **Creative Movement:**

Incorporate some physical activity by having the student mimic gorilla movements (like swinging arms, jumping, etc.) for a few minutes. Afterward, discuss how these movements help gorillas in their natural habitat.

Talking Points

- "Did you know that gorillas are very agile? They can climb trees and swing from branches just like you do in Gorilla Tag!"
- "In math, we can think of tagging as a way to practice our skills. Each problem you solve is like getting closer to tagging your friend!"
- "Gorillas live in groups called troops. Just like in Gorilla Tag, teamwork is important for gorillas to stay safe and find food!"
- "What do you think makes a good teammate in a game? Let's think about how gorillas help each

other in the wild!"

- "When you research gorillas, you learn about their habitat. Can you tell me what a habitat is?"
- "Gorillas communicate with each other using sounds and body language. How do you communicate in your games?"
- "Let's talk about why it's important to learn about animals like gorillas. How does it help us understand our world better?"
- "What are some challenges gorillas face in the wild? Why is it important to protect their habitats?"
- "How does playing games like Gorilla Tag help us stay active and healthy, just like gorillas in the wild?"
- "Can you think of other animals that are agile like gorillas? Let's compare them!"
