

Objective

By the end of this lesson, you will be able to understand the concept of ecosystems and how different organisms interact within them.

Materials and Prep

Materials: Minecraft game

Prep: Ensure the Minecraft game is installed and ready to play.

Activities

1. Explore a Minecraft world and observe the different animals and plants present.
2. Create a farm in Minecraft and learn about the interactions between animals, plants, and the environment.
3. Build a mini-ecosystem in Minecraft, including different organisms and their roles within the ecosystem.

Third Grade Talking Points

- Plants and animals live together in the same place. They all need each other to survive and grow. For example, flowers need bees to help them make seeds. Just like in Minecraft, different animals and plants work together in the game's world.
- Every living thing has a home, or a place where it lives. This is called their habitat. In Minecraft, animals and plants have their own habitats where they live and grow.
- When we take care of the environment, we are helping all the living things around us. In Minecraft, we can build and protect the environment to help the animals and plants thrive.
