

Instructions

Read the information below about flowers and then answer the questions that follow.

Did You Know?

Flowers are the reproductive parts of many plants. They come in many shapes, sizes, and colors. Some flowers, like roses and tulips, are popular in gardens. Others, like dandelions, may grow wild in fields. Flowers are important for attracting insects like bees, which help with pollination. This is when pollen moves from one flower to another, allowing plants to produce seeds and grow new plants!

Questions

1. What are flowers used for in plants?

2. Name two types of flowers mentioned in the text:

3. Why are bees important to flowers?

4. Draw your favorite flower in the box below:

5. Write one interesting fact you learned about flowers:
